Bug Reporting

 # SL 01

Issue: Verify that the user should not be able to enter special characters in the zip code field.

Reproducing Steps:

1. Go to the URL
https://www.foodpanda.com.bd/
2. Click on the Sign up now button in the Header.
3. Click the "Get started" link and Go to https://www.foodpanda.com.
bd/corporate/sign-up

Env: Production.

Module: Register

Severity: P2

Screenshot: Postal code special characters error

Expected:

Responsible QA: Touhedul

Bug Reporting

 # SL 02

Issue: Verify that the maximum & minimum length for the postal code field

Reproducing Steps:
1. Go to the URL
https://www.foodpanda.com.bd/
2. Click on the Sign up now button in the Header.
3. Click the "Get started" link and Go to https://www.foodpanda.com.

LIMITATIONS			
Documents		**Received**	**Useful**
PRD		No	No
USER STORY		No	No

	Testing Type in Scope	Description
Yes/ No. Justification (If No):	**Functional Testing**	This type of testing ignores the internal parts and focuses only on the output to check if it is as per the requirement or not.
Yes/ No. Justification (If No):	**Integration Testing**	Testing of all integrated modules to verify the combined functionality after integration is termed as Integration Testing.
Yes/ No. Justification (If No):	**Negative Testing**	Testing having the mindset of "attitude to break" using incorrect data and invalid inputs.
Yes/ No. Justification (If No):	**Usability Testing**	Test application from user friendliness perspective.
Yes/ No. Justification (If No):	**Browser Compatibility Testing**	Browser Compatibility Testing is performed for web applications and it ensures that the software can run with the combination of different browser and operating system. This type of testing also validates whether web application runs on all versions of all browsers or not.
Yes/ No. Justification (If No):	**Boundary Value Testing**	There is an upper and lower boundary for each range and testing is performed on these boundary values.
Yes/ No. Justification (If No):	**Risk Based Testing Or Regression Testing**	Risk-Based Testing includes testing of highly critical functionality, which has the highest impact on business and in which the probability of failure is very high. Testing an application as a whole for the modification in any module or functionality is termed as Regression Testing.

GENERAL INFORMATION					
test stage	Unit performance	Functionality Regression	Integration Acceptance	System Pilot	Interface
	Specify the testing stage for this test case				
Date:	mm/dd/yy		**System Date,If Applicable**		mm/dd/yy
Tester:	Specify the name (s)of who is testing this case scenario.		**Test Case Number**		Specify the unique test number assigned to the test case
Test case Description:	Provide a brief description of what functionality the test case				
Results:	Pass Fail		**Incident Number,If Applicable:**		Specify the unique identifier assingned to the incident.
INTRODUCTION					
Requirement(s) to be tested:	Identify the requirments to be tested and include the requirment number and description from the Requirments Traceability Matrix				
Roles and Responsibilites:	Describe each project team member and stakeholder involved in the test, and identify their associated responsibility for ensuring the test is executed appropriately				
Set Up procedures:	Describe the sequence of actions necessary to prepare for execution of the test				
Stop Procedures:	Describe the sequence of actions necessary to terminate the test				
ENVIRONMENTAL NEEDS					
Hardware:	Identify the qualities and configurations of the hardware required to execute the test case				
Software:	Identify system and application software required to execute the test case.Specify any software that the test case will interact with.				
Procedural Requirments:	Describe any constraints on the test procedures necessary to execute the test case				
TEST					
Test Items and Features:	Identify and describe the items and features that will be exercised by the test case.Group the test cases into logically related scenarios that test related items and features. For each item or feature,a reference to its associated requirment source should be include.				

Input Specifications:	Define each input required to execute the test case and reference any required relationship between inputs.
Procedural Steps:	Describe the sequence of actions necessary to prepare and execute the test case.Provide detailed testprocedures for each test case; explain precisely how each test case will be executed.
Expected Results of Case:	Describe the outcome anticipated from the test case.Specify the criteria to be used to determine whether the item has passed or failed.
ACTUAL RESULTS	
Output Specifications:	Define all of the outputs and features required of the test case and provided expected values. While executing the test, record and describe the visually observable outputs as they occure.Produce tangible evedence of the output such as ascreen print. At the conclusion,discreancies between the expected results and the actual results.
